

# INSTALLATION GUIDE

## PREPARATION

• Upon receiving the panel, you will be provided with a comprehensive mounting kit that comprises a plug and hook. These components will ensure a secure attachment. Useful tools for installation:

- spirit level, measure tape and pencil
- drill/screwdriver and hammer

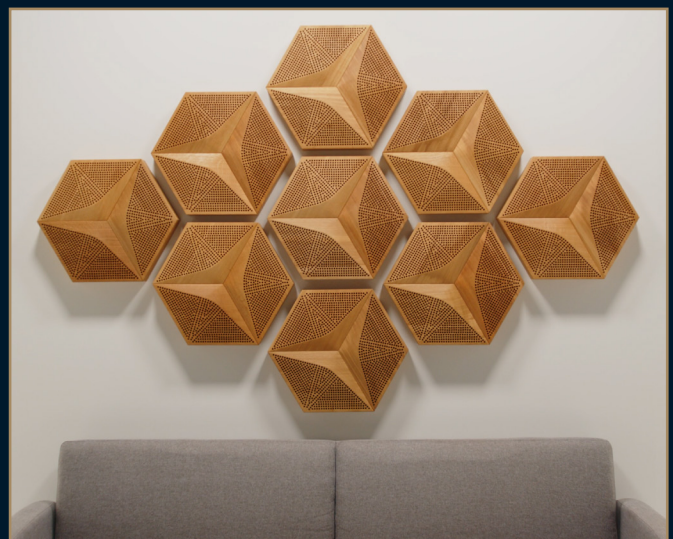

1. To get started, open the package containing the panel and mounting set. Carefully unpack both items.

2. Mark the spot on the wall where you want them to hang and drill a hole for the plug in that location. Then, insert the plug and hook to secure the panels.

3. To hang the panel, use the prepared hook. Note, that each panel has four mounting holes on the back. Make sure to choose the right one.

4. After application, wipe the dust off the panels with a dry microfiber cloth. You can also polish the panels with special wood preservatives.
